

Introduction to ZIA – The Eyes in the Field

With **Neurolabs' ZIA technology**, you can return millions of data points from the field to inform strategic decisions, enhancing go-to-market strategies across three primary functions: Execution, Commercial, and Pricing.

CPGs can achieve **perfect store execution**, ensuring products and any promotional items are always well-placed and visible and displayed with the correct pricing levels. This protects the brand, drive revenue growth, and provide substantial cost savings and strategic advantages in a competitive market.

ZIA is designed to significantly **enhance retail execution** by reducing risk, increasing revenue, and cutting cost through a Single Platform Enabling a Unified Approach to Visibility.

A single platform

Our platform is designed to scale with your business. Whether managing a single retail outlet or a nationwide chain, the platform can accommodate growing data volumes and expanding operations. Its flexible architecture supports customisation and integration with existing systems, ensuring a smooth transition and ongoing adaptability to evolving business needs.

By normalising data from warehouses, distribution centres, POS systems, backrooms, and shelf audits into one platform, CPGs can achieve greater accuracy, efficiency, and responsiveness.

The ability to capture and deliver visibility of what's happening across the supply chain means that the Neurolabs single enterprise platform represents a significant advancement in retail technology, providing a unified and comprehensive solution for data integration and management.
